

PACIFIC ARK

Engaging with Pacific
Island communities and
their surrounding
environment.

WHO WE ARE

At Pacific Ark, we are a team of highly motivated, caring, and adventurous individuals who share a common goal:

- to prioritise nature in our communities and infrastructure projects. We have a deep understanding that putting nature first is essential to achieving a sustainable future for our planet, especially within the vulnerable Islands of the Pacific's.
- Our team consists of individuals from diverse educational and cultural backgrounds, who bring a wealth of knowledge and experience to our projects. We believe that by aligning ourselves with like-minded individuals and organisations, we can work together to take action and be at the forefront of addressing global problems such as climate change.
- We are committed to rethinking how we integrate complex systems to create sustainable, regenerative solutions that benefit both humans and the planet. Our passion for sustainability and regenerative practices drives us to strive towards creating a better world for future generations.

VISION & MISSION

VISION

Our vision at Pacific Ark is to collaborate with remote Pacific Island communities, industry partners, researchers, governments, and non-profit organizations to create a future where these communities are self-sustaining, zero-waste ecosystems that support both livelihoods and the environment.

Through our work and partnerships, we aim to empower these communities to become stewards of their natural resources and create a regenerative-adaptive system that protects the environment for future generations.

MISSION

At Pacific Ark, our mission is to promote community and environmental well-being within Pacific Island Nations by prioritising nature and working with it, not against it. We believe that raising awareness about the benefits of sustainable living practices is essential to achieving our goals. We strive to empower Pacific Island communities by providing education, resources, and implementing regenerative projects. We also aim to inspire the next generation of leaders by engaging with youth groups and promoting a new perspective on life that values the environment and social justice. We are committed to collaborating with partners from diverse sectors to create innovative solutions that meet the unique needs of these communities and achieve our shared vision.

OBJECTIVES

By supporting these objectives, the Foundation aims to make a positive and lasting impact on the communities it serves and the environment in which they live.

1

VOLUNTEERING – PERSONAL GROWTH & DEVELOPMENT

- Connecting with nature, cultures, people and communities
- Bringing our objectives together through connection with Nature, Communities and then Self
- Volunteering programs and placement across our objectives

2

COMMUNITY ENGAGEMENTS

- Promoting personal growth and development;
- Empowering youth through education; and
- Supporting mindfulness and wellbeing.

3

ENVIRONMENTAL CONSERVATION

- Preserving rainforests and coastlines;
- Increasing awareness of environmental issues and developing programs to address them; and
- Conserving and restoring biodiversity and habitats.

4

REGENERATIVE-COMMUNITY PROJECTS

- Developing climate-resilient infrastructure
- Implementing regenerative and adaptive agriculture and aquaculture systems and practices
- Implementing solutions to ensure water security
- Addressing sanitation and waste management challenges.
